PEAK RMS

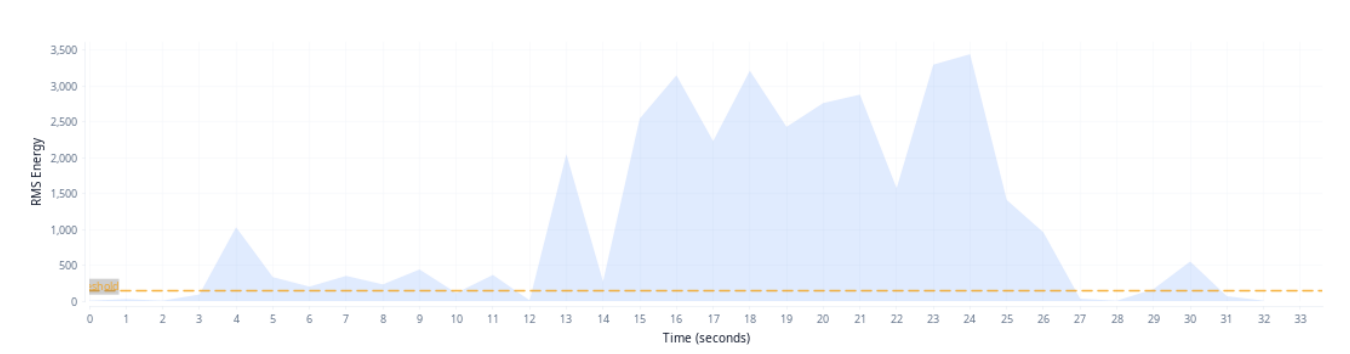

Session Overview

Key performance indicators from your meeting session

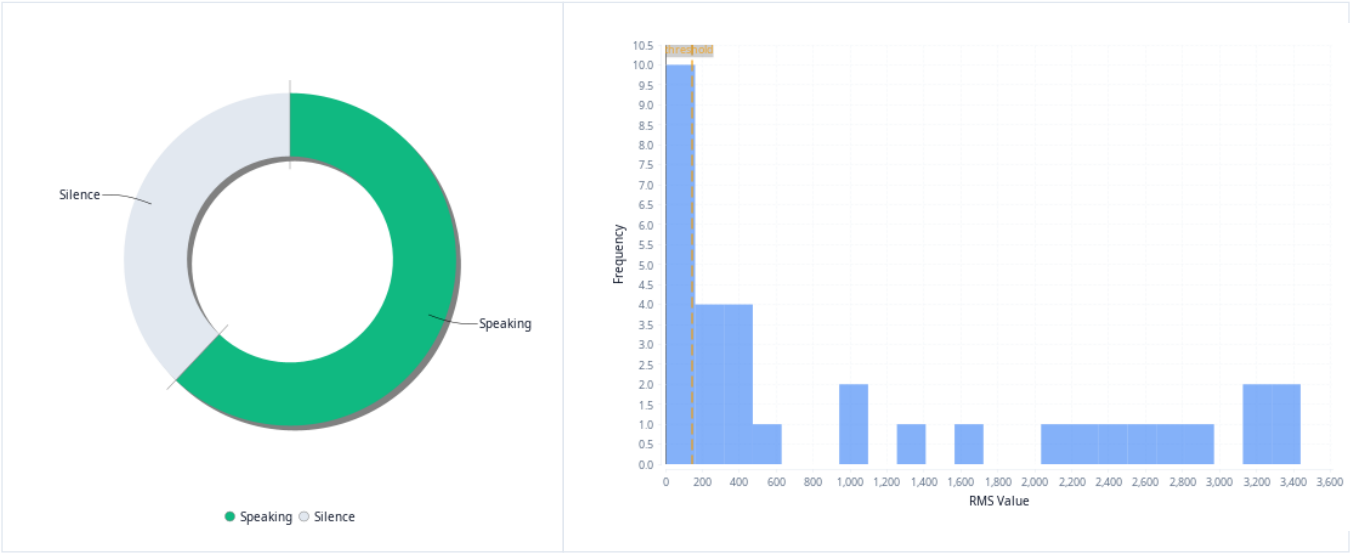

Energy Timeline

RMS energy per second — amber dashed line marks the silence threshold

Audio Distribution

How your session energy was distributed between speech and silence

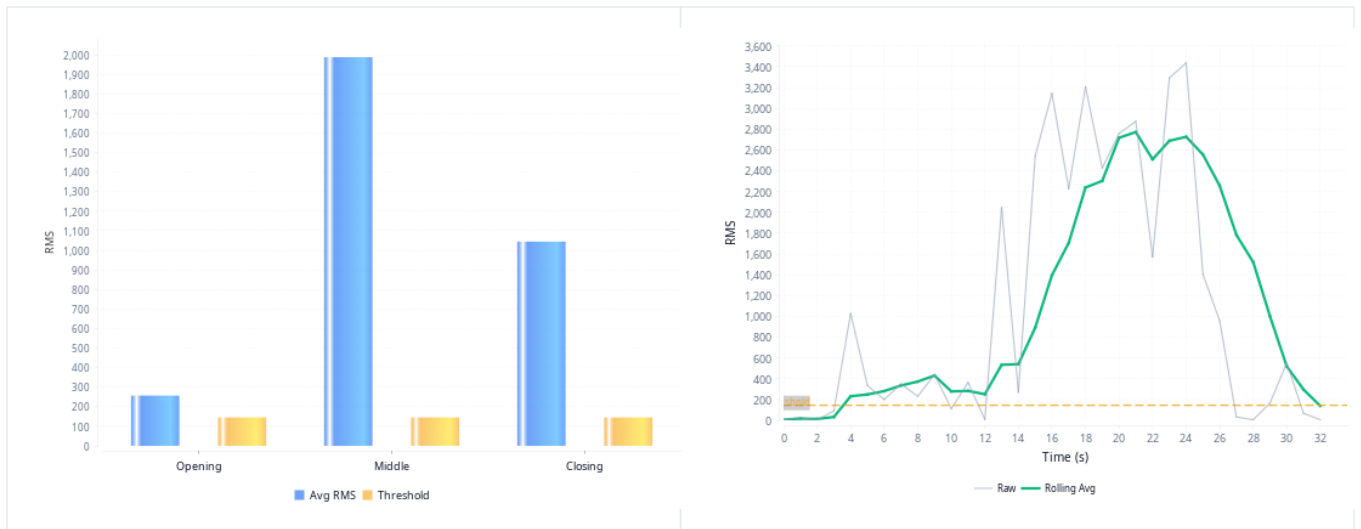

Talk ratio — speaking vs silence

RMS value distribution with threshold marker

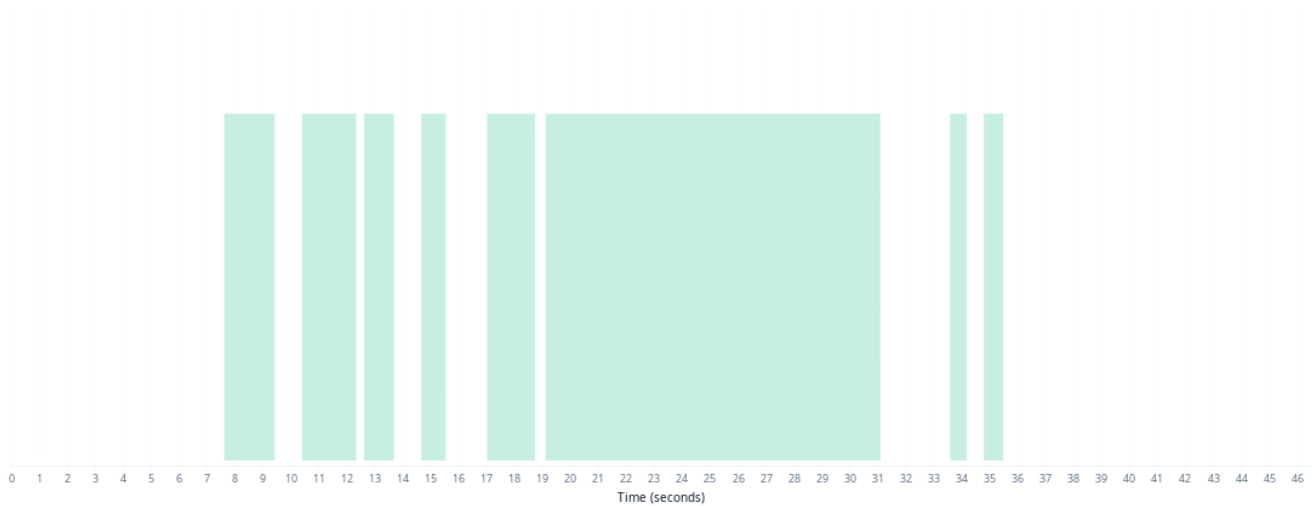

Engagement Profile

How energy evolved from opening to close, and whether momentum sustained

Speaking Segments

Individual speaking bursts detected during the session

Each bar represents one speaking burst on the session timeline

Speaking Dynamics

Key Timeline Moments

Peak energy
Highest intensity at 24s (RMS 3438).

Active range

Sustained above-threshold activity from 4s to 30s.

Longest quiet window

4s of low activity starting at 0s.

Technical Details

Audio capture configuration and session diagnostics

Parameter	Value
Audio Format	44,100 Hz • 16-bit PCM • Mono
Buffer Size	4,096 bytes per chunk
Silence Threshold	144.93 RMS (auto-calibrated)
Average RMS	1106.43
Peak RMS	5312.50
Total Frames	717
Silent Frames	272 (37.9%)
Speaking Frames	445 (62.1%)
Session Duration	44.2 seconds

Session Insight

Good session profile — 62.1% speaking with 8 distinct segments averaging 2.6 seconds each.

Executive Action Plan

Priority 1 — Calibration Confidence

Calibration appears functional. Keep first 3-4 seconds silent at each session start for stable baseline estimation.

Priority 2 — Participation Shape

Participation density is in a healthy range. Preserve this cadence for similar meeting types.

Priority 3 — Speaking Rhythm

Speaking rhythm is balanced. Continue with the same facilitation pattern.
